## Foreword

Developing a practical and affordable benefit package is one of the important tasks for achieving Universal Health Coverage. It essentially involves a process of selecting, prioritizing and agreeing the services and also identifying the appropriate levels from where the services are to be delivered.

In identifying and selecting diseases and health related problems, International Classification of Diseases (ICD-10) developed by WHO is being used worldwide. ICD is a global standard diagnostic classification for all general epidemiological functions, specially for health management purposes and clinical use. The main purpose of ICD is to harmonize medical recording practices worldwide. It is also used for morbidity and mortality statistics and for decision making in medical practices and reimbursement.

Health Economics Unit of Ministry of Health and Family Welfare as part of their endeavor to develop a benefit package, has identified and listed the services to be delivered from different levels following the ICD-10. It has been developed through a consultative process involving the relevant stakeholders and keeping the epidemiology, technical competence, ability and affordability into active consideration. It is fundamentally a continuous process and the package will be a dynamic one to meet the growing demand, requirement and ability. However, it may be considered as a basic document for further work, pricing of the services and developing the referral guidelines.

I strongly believe that having a comprehensive list of services with appropriate earmarking of delivery levels (primary, secondary and tertiary level) will immensely help in policy making, specially in allocating resources — human, finance and logistics, and also optimizing the health care services in the health system of our country. It will also help towards developing a structured referral system and achieving the goal of becoming fully compliant in using ICD-10.

**Syed Monjurul Islam**

Secretary

Ministry of Health & Family  
Welfare

## **Acknowledgement**

Level Wise Distribution of Diseases for Management in the Health Service of Bangladesh is an organized attempt to list down the diseases to be treated and managed at different the level of health service delivery. It is an output of collaborative efforts by respected Clinicians, experienced Hospital and Health Managers, who used the International Classification of Diseases (ICD) -10 as the basis for classifying the diseases and carefully considered the resources and capacity of the health care facilitates in distributing those across the levels. Health Economics Unit as the coordinator of the process gratefully acknowledges the participation and contribution of all the experts, practitioners, managers and members in outlining the document.

Personally, I would like to record my sincere thanks and gratitude to Dr M A Faiz, Prof Dr Md Ridwanur Rahman and others who actively involved in the process.

This document will require to be changed and updated in regular intervals with the changing landscape of health service delivery – especially mode and capacity of delivery.

I hope that this document will help in improving the efficiency of the health delivery system through a number of ways specially in better understating of the organizational and staff responsibility, enhancing accountability, formulating resource requirement, and in developing a formal referral system.

**Md Ashadul Islam**  
**Director General**  
Health Economics Unit  
MOHFW.

## Preamble

ICD-10 is the International Statistical Classification of Diseases and Related Health Problems (ICD), a medical classification list by the World Health Organization (WHO). It contains codes for diseases, signs and symptoms, abnormal findings, complaints, social circumstances, and external causes of injury or diseases.

The code set allows more than 14,400 different codes and permits the tracking of many new diagnoses. The codes can be expanded to over 16,000 codes by using optional sub-classifications.

In health care, coding systems are used to differentiate diagnoses and procedures in virtually all treatment settings. Diagnostic and procedural codes are connected to nearly every system and business process in health plans and provider organizations, including reimbursement and claim processes, world wide. The ICD codes provide a standardized approach to categorize disease and patient conditions and surgical, diagnostic and therapeutic procedures in the inpatient setting.

The major benefit of using ICD 10 in Health Service Delivery are operational and strategic planning and designing healthcare delivery systems, measuring the quality, safety and efficacy of care, improving clinical, financial, and administrative performance, conducting research, epidemiological studies, and clinical trials, designing payment systems and processing claims for reimbursement etc.

Identification & type of health services in different level (primary, secondary & tertiary) has not established in our health services, which is creating a lot of challenges for distribution of manpower, logistics and for developing the health benefit package. MOHFW has decided to identify the services in different level for effective strategic planning.

22 chapters of ICD 10 were divided in to 15 working group for identification of diseases level wise, ie primary, secondary and tertiary level , considering the manpower, equipment's and logistics with three categories, "Most common", "Common", "Less Common". The working group composed of experts, according to the chapters. Draft document has developed after the compilation the task of 15 groups. National validation workshop was held for finalization of the document with the relevant stakeholders. The health service benefit package will be developed on the basis of ICD 10, level wise distribution which will contain typically contains a necessary & limited subset of all health care interventions made possible by today's medical technology.

A package can link treatment and prevention activities, rather than viewing them in isolation of one another. It therefore recognizes that treatment activities, and costs, could be eliminated with adequate attention paid to prevention.

**Dr Md Aminul Hasan**

MBBS. MPH. PhD

Coordinator

Level wise distribution of diseases for Health Service Management, Bangladesh  
Health Economics Unit. MOHFW

## *Content*

---

1. Introduction	7
2. Diseases (ICD-10) for primary level	10-20
3. Diseases (ICD-10) for Secondary level	21-42
4. Diseases (ICD-10) for Tertiary level	43-83

# Introduction

In health care, coding systems are used to differentiate diagnoses and procedures in virtually all treatment settings. Diagnostic and procedural codes are connected to nearly every system and business process in health plans and provider organizations, including reimbursement and claim processes, worldwide.

The International Statistical Classification of Diseases is a diagnosis coding system of diseases and signs, symptoms, abnormal findings, complaints, social circumstances and external causes of injury or diseases and a procedure coding system for inpatient procedures.

The ICD codes provide a standardized approach to categorize disease and patient conditions and surgical, diagnostic and therapeutic procedures in the inpatient setting.

ICD classifications are used to assign codes to diagnoses in virtually all health care settings, including inpatient and outpatient settings and physician offices. ICD codes allow comparison of collection, classification, processing, and presentation of morbidity and mortality statistics globally.

ICD procedure codes are used only on inpatient hospital claims to capture inpatient procedures. Entities that will use the updated ICD-10 codes include hospital and professional billing, registries, clinical and hospital departments, clinical decision support systems, and patient financial services.

## **Benefit of using ICD 10:**

Health Service Delivery:

1. Operational and strategic planning and designing healthcare delivery systems
2. Measuring the quality, safety and efficacy of care
3. Improving clinical, financial, and administrative performance
4. Conducting research, epidemiological studies, and clinical trials
5. Setting health policy
6. Monitoring resource utilization
7. Preventing and detecting healthcare fraud and abuse
8. Designing payment systems and processing claims for reimbursement
9. Tracking public concerns and assessing risks of adverse public health events

**Improve patient care:** The increased level of detail within ICD-10 is designed to improve the ability to measure quality, safety and efficacy of care, which should ultimately lead to improved patient care.

**Improve research:** For example, ICD-10 is likely to open new opportunities in injury research and trauma services evaluation, since the code set more accurately classifies the nature of injuries and correlates them with cause, treatment, and outcome. The new code set will also allow the U.S. to conduct comparative effectiveness research with other countries that already use ICD-10.

**Lend insight to the setting of health policy:** With higher quality data analytics afforded by ICD-10, policy leaders will be empowered to better informed policy decisions.

Facilitate improved public health reporting and tracking: The increased level of detail will enable agencies to track public health risks and trends in greater detail.

Improve clinical, financial and administrative performance: The quality data afforded by ICD-10 can reveal insights into patterns of care and more. These insights enable administrators to make more informed decisions and achieve positive clinical and financial outcomes.

Allow for monitoring of resource utilization: The ICD-10 codes will allow administrators to track the amount of time spent on procedures, enabling them to better allocate resources.

At present, identification & type of health services in different level (primary, secondary & tertiary) has not established, which has created a lot of challenges for distribution of manpower, logistics and for developing the health benefit package. MOHFW has decided to identify the services in different level for effective strategic planning.

**Steps of development:** In the beginning of the process, literature review and other necessary documents regarding ICD 10 for development of the 1<sup>st</sup> draft . After development of 1st draft based on the literature review, a planning workshop was held with the aim to develop the document.

22 chapters of ICD 10 were divided in to 15 working group for identification of diseases, level wise, ie primary, secondary and tertiary level , considering the manpower, equipments and logistics with three categories, “Most common”, “Common”, “Less Common”. The working group composed of specialists & experts, according to the chapters. 2<sup>nd</sup> Draft document has developed after the compilation the task of 15 groups. National validation workshop was held for finalization of the document with the relevant stakeholders.

ICD-10 represents a bold and necessary move for the healthcare industry. The hope is that this more precise information detailing patient maladies and treatments will fuel the effort to utilize the many benefits brought by Big Data, machine learning, and advanced analytics, including prediction, classification, and the discovery of hidden knowledge waiting to be found in healthcare’s immense data stores.

**ICD 10 & Benefit package:** The health service benefit package will be developed on the basis of ICD10, level wise distribution.

Benefit Package of health services will have the following distinguishing features:

- It typically contains a necessary & limited subset of all health care interventions made possible by today’s medical technology.
- Interventions are not randomly assigned to the package; rather, they result from a prioritization process to achieve specific technical and/or social objectives.
- Interventions are not independent from each other within the package. In fact, many are chosen specifically to complement or reinforce each other so that there is synergism among them.

Designing a package of services has certain advantages. By pooling together a number of interventions, it may be possible to take advantage of the shared use of inputs and therefore reduce the cost of obtaining services. Grouping together services in a package has the following benefits:

- The link between treatment and prevention
- Multiple outputs from inputs
- Identification of all required inputs
- Coordination of resources
- Directing demand for services

A package can link treatment and prevention activities, rather than viewing them in isolation of one another. It therefore recognizes that treatment activities, and costs, could be eliminated with adequate attention paid to prevention.

**Uses of ICD 10 code in benefit package:**

*Operations Management* - The Operations Management business processes use ICD-10 codes for processing claims, service authorization, and capitation pricing, to check recipient lifetime limits, verify clinical appropriateness of services, and suspend encounters

*Program Management* - Program Management activities include adding new codes, adjusting rates associated with codes, and adding and updating existing rates, benefits, provider information, and drug formulary information.

*Contractor Management* - Contractor Management business area processes include Requests for Proposals (RFP), reviews of content against an RFP, designates contractor/vendor, handles the protest process, negotiates contracts, and notifies parties.

## Primary Level

Code	Name of the Diseases	UHC	No.
A00	Cholera	VC	1
A00.a	Cholera With AKI	VC	1
A01	Typhoid and paratyphoid fevers	VC	1

H74.9	Disorder of middle ear and mastoid, unspecified	UC	
H75*	Other disorders of middle ear and mastoid in diseases classified	UC	
H75.0*	Mastoiditis in infectious and parasitic diseases classified elsewhere	UC	
H75.8*	Other specified disorders of middle ear and mastoid in diseases	UC	
H80.2	Cochlear otosclerosis	UC	
H80.8	Other otosclerosis	UC	
H81	Disorders of vestibular function	LC	
H81.0	Meniere's disease	LC	
H81.1	Benign paroxysmal vertigo	LC	

VC=Very common, C= Common, LC= Less common

Code	Name of the Diseases	MCH & SH	No.
H81.2	Vestibular neuronitis	LC	
H81.3	Other peripheral vertigo	LC	
H81.4	Vertigo of central origin	LC	
H81.8	Other disorders of vestibular function	LC	
H81.9	Disorder of vestibular function, unspecified	UC	
H82*	Vertiginous syndromes in diseases classified elsewhere	UC	
H83	Other diseases of inner ear	UC	
H83.2	Labyrinthine dysfunction	UC	
H83.3	Noise effects on inner ear	UC	
H83.8	Other specified diseases of inner ear	UC	
H83.9	Disease of inner ear, unspecified	C	
H90	Conductive and sensorineural hearing loss	C	
H90.0	Conductive hearing loss, bilateral	C	
H90.1	Conductive hearing loss, unilateral with unrestricted hearing on the	C	
H90.2	Conductive hearing loss, unspecified	C	
H90.3	Sensorineural hearing loss, bilateral	C	
H90.4	Sensorineural hearing loss, unilateral with unrestricted hearing on the	C	
H90.5	Sensorineural hearing loss, unspecified	UC	
H90.6	Mixed conductive and sensorineural hearing loss, bilateral	UC	
H90.7	Mixed conductive and sensorineural hearing loss, unilateral with	UC	
H90.8	Mixed conductive and sensorineural hearing loss, unspecified	LC	
H91	Other hearing loss	LC	
H91.0	Ototoxic hearing loss	LC	
H91.1	Presbycusis	UC	
H91.2	Sudden idiopathic hearing loss	UC	
H91.3	Deaf mutism, not elsewhere classified	UC	
H91.8	Other specified hearing loss	UC	
H91.9	Hearing loss, unspecified	C	
H92	Otalgia and effusion of ear	C	
H92.0	Otalgia	LC	
H92.1	Otorrhoea	LC	
H92.2	Otorrhagia	UC	
H93	Other disorders of ear, not elsewhere classified	UC	
H93.0	Degenerative and vascular disorders of ear	C	
H93.1	Tinnitus	LC	
H93.2	Other abnormal auditory perceptions	LC	
H93.3	Disorders of acoustic nerve	UC	
H93.8	Other specified disorders of ear	UC	
H93.9	Disorder of ear, unspecified	UC	
H94*	Other disorders of ear in diseases classified elsewhere	LC	
H94.0*	Acoustic neuritis in infectious and parasitic diseases classified	UC	
H94.8*	Other specified disorders of ear in diseases classified elsewhere	LC
